Devatop Volunteers Platform — Feature Requirements

Oct 24, 2026 · @Olukayode Israel

Overview

Devatop needs a new volunteers platform that lets people apply, get approved, take part in activities and get recognised, while staff manage everything from one admin section. The previous volunteers website was lost and could not be recovered, so this build also has to make sure Devatop owns and can always access the platform.

Who uses it

- **Visitors**: people learning about Devatop and deciding whether to volunteer.
- **Volunteers**: approved people taking part in programmes, events and remote tasks.
- **Admins**: Devatop staff and coordinators who review, schedule, track and report.

How to read this document: features marked **MVP** are needed at launch. Everything else can come in later phases (see Build phases at the end).

1. Public website

The public side convinces people to volunteer and shows them where they fit.

Feature	What it does	Phase
Home page	Who Devatop is, why volunteer, impact numbers (volunteers, hours, states reached), clear "Become a Volunteer" button	MVP
Opportunities board	Open roles (comms, AI4Rights facilitators, field outreach, event support) with location, remote or physical, time commitment, skills and deadline; filter by state, programme and skill	MVP
FAQs	Who can volunteer, minimum age, whether it is paid, whether corps members and SIWES students can use it for logbooks	MVP
Contact form	Enquiries, plus links to Devatop's main website and socials	MVP

Feature	What it does	Phase
Programme pages	What each programme does and how volunteers fit in	Phase 2
Events calendar	Upcoming outreaches, trainings and campaigns people can sign up for	Phase 2
Stories and gallery	Volunteer testimonials and photos from activities	Phase 3

2. Registration and onboarding

Every volunteer goes through one application flow, and nobody works with children or survivors until they have signed the safeguarding agreement.

Feature	What it does	Phase
Application form	Name, phone, email, state and LGA, occupation, skills, interests, availability, languages, how they heard about Devatop, NYSC state code (optional); admins can add custom fields	MVP
Email or phone verification	OTP check to block fake sign-ups	MVP
Consent checkboxes	Privacy notice, data use, photo and media consent, each recorded with a timestamp; applicants under 18 enter their date of birth and a parent or guardian confirms consent through their own email or phone	MVP
Code of conduct and safeguarding agreement	Signed digitally before approval, because Devatop works with children and trafficking survivors	MVP
Application status tracking	Submitted, Under review, Interview, Approved or Rejected, with an email at each stage	MVP
Onboarding checklist	Orientation video, handbook, safeguarding training, WhatsApp group link	Phase 2
Document upload	ID, CV, NYSC call-up letter or school letter where a role needs it	Phase 2

Feature	What it does	Phase
References	Referee details collected for roles involving children or survivors	Phase 2

3. Volunteer dashboard

Once approved, each volunteer gets a personal dashboard to manage their activities, hours and certificates.

Feature	What it does	Phase
Profile management	Edit details, skills, availability and photo	MVP
Opportunities and sign-ups	Browse and apply for roles and shifts, see what they signed up for, cancel with notice	MVP
My hours	Total hours and hours per activity; log hours for remote work for admin approval	MVP
Certificates and letters	Download certificate of volunteering and hours statement; request a recommendation letter (corps members and students will need this often)	MVP
Digital volunteer ID	ID card with QR code for events and outreaches	Phase 2
Resources library	Handbooks, slides, recorded trainings, brand guidelines	Phase 2
Notifications inbox	Announcements, reminders and approvals	Phase 2
Post-activity feedback	Short form after each activity	Phase 2
Badges and milestones	10 hours, 50 hours, first outreach, and similar	Phase 3

4. Admin section

The admin section is where Devatop staff run the whole programme, and each admin sees only what their role needs.

Admin roles

Role	Can do
Super Admin	Everything, including managing other admins and settings
Programme Manager	Manage volunteers, opportunities and reports for their programme
Volunteer Coordinator	Review applications, schedule, take attendance, approve hours
State or Chapter Lead	Manage volunteers and events in their state only
Viewer	Read-only access to dashboards and reports
Department Lead	Manage volunteers, calls to action, attendance, hours and guides for their department only (see section 18)

Role-based access is **MVP**. An **audit log** (who approved, edited or deleted what, and when) comes in Phase 2.

Volunteer management

Feature	What it does	Phase
Volunteer database	Search and filter by state, skill, status, programme, hours and join date	MVP
Application review queue	Approve, reject, request more info, add private notes, schedule interview	MVP
Volunteer status	Applicant, Active, Inactive, Suspended, Alumni	MVP
Tags and groups	For example "AI4Rights facilitators", "Abuja team", "Comms"	Phase 2
Bulk actions	Approve, message, tag or export many volunteers at once	Phase 2
Vetting notes	Private background notes for sensitive roles	Phase 2

Opportunities, events and scheduling

Feature	What it does	Phase
Create and edit opportunities	Slots, location, required skills, deadlines	MVP
Attendance	Coordinator marks attendance from a list	MVP
Hours approval	Approve, edit or reject hours volunteers submit	MVP
QR check-in and check-out	Volunteers scan in and out at events; hours recorded automatically	Phase 2
Shift scheduling	Capacity limits and a waitlist when slots fill	Phase 2
Manual assignment	Admins assign volunteers directly, alongside self sign-up	Phase 2

Training and compliance

- Track who has completed required training (orientation, safeguarding). **Phase 2**
- Block volunteers from sensitive roles until required training is done. **Phase 2**
- Reminders for anything that needs renewing. **Phase 3**

Recognition

- **Certificate generator**: fills name, hours, role and dates into Devatop's template, with a unique verification code anyone can check online. **MVP**
- **Volunteer of the Month** spotlight on the public site. **Phase 3**

5. Communication

Email covers the official messages, but WhatsApp is where Nigerian volunteers actually read things, so the platform should support both.

Feature	What it does	Phase
Automated emails	Welcome, application received, approved, event reminder, thank-you after an event	MVP
Bulk email to filtered groups	For example all Lagos volunteers, or all AI4Rights facilitators	MVP

Feature	What it does	Phase
WhatsApp group link	Shown after approval and on the dashboard	MVP
Announcements board	Posts on the volunteer dashboard	Phase 2
Message templates	Saved messages coordinators reuse	Phase 2
SMS and WhatsApp Business API	Reminders and broadcasts sent from the platform	Phase 3

6. Reports and analytics

Reports turn volunteer activity into numbers Devatop can put in grant applications and donor reports.

Feature	What it does	Phase
Overview dashboard	Total volunteers, active volunteers, new sign-ups this month, total hours, upcoming events	MVP
Export to Excel, CSV and PDF	Any list or report	MVP
Reports by programme, state, event and period	Filterable breakdowns	Phase 2
Retention	Who stopped taking part, and when	Phase 3
Value of volunteer time	Hours multiplied by an hourly rate Devatop sets	Phase 3
Demographics	Gender, age range and state, for donor reporting	Phase 3

7. Data protection and security

The platform must comply with the Nigeria Data Protection Act 2023, and as the organisation behind AI4Rights, Devatop should model good data practice.

What the law requires (all MVP)

- **Proof of consent**: the organisation carries the burden of proving consent, so store a timestamped record of exactly what each volunteer agreed to.
- **Right to withdraw**: where processing relies only on consent, people must be told they can withdraw before they give it. Add a "withdraw consent / delete my account" option.
- **Minors**: processing children's data needs parent or guardian consent plus age verification. Devatop will accept volunteers under 18, so the platform needs a date-of-birth check and a guardian consent step before any under-18 application is reviewed.
- **Access to own data**: volunteers can request a copy of their data. Add a "download my data" button (Phase 2).
- **Privacy policy and cookie consent**: a privacy policy page, and explicit consent for non-essential cookies (Clym summary).

Security (MVP)

- HTTPS everywhere and hashed passwords.
- Two-factor authentication for all admins.
- Phone numbers and addresses visible only to roles that need them; a State Lead sees only their state.
- Session timeouts on the admin section.

8. Technical requirements and ownership

The last site was lost because access was lost, so ownership and backups are launch requirements, not extras.

Ownership (MVP)

- [ ] Domain, hosting account and code repository registered to an official Devatop email, never a staff member's personal account.
- [ ] At least two Super Admins, so no single person can lock Devatop out.
- [ ] Automatic daily backups of the database and uploads, stored away from the main server.
- [ ] Handover document covering hosting, deployment and where logins are kept (in a shared password manager).

Performance and access

- Mobile-first and lightweight, since most volunteers will use phones on limited data. **MVP**
- Installable as a web app (PWA) so it works like an app without the Play Store. **Phase 2**

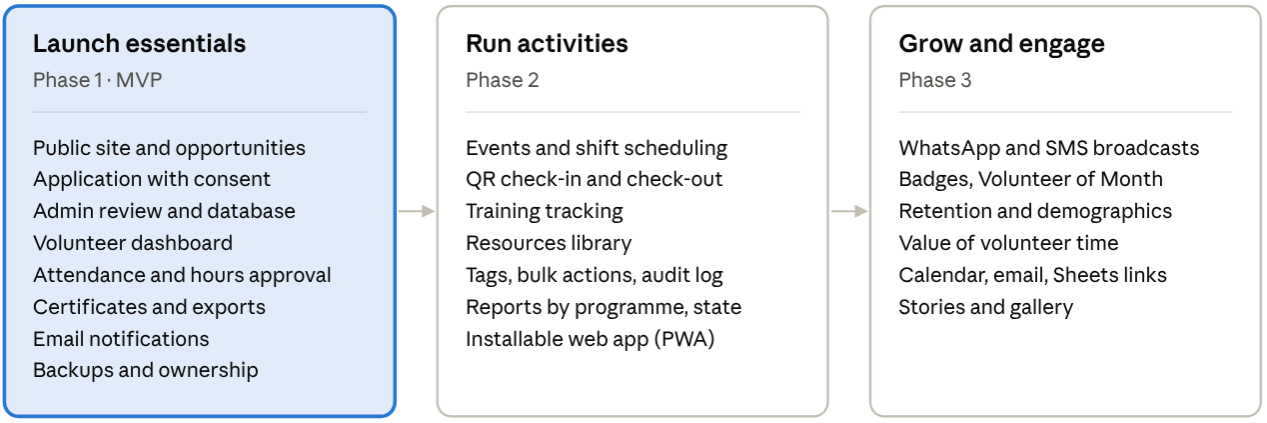

Integrations (Phase 3)

- Google Calendar for events.
- Email marketing tool (Brevo or Mailchimp).
- Google Sheets export.
- Link with Devatop's main website.

9. Build phases and next steps

Build in three phases so volunteers can start applying as soon as Phase 1 is live.

Launch the essentials first, then add activities and growth

build roadmap · 3 phases

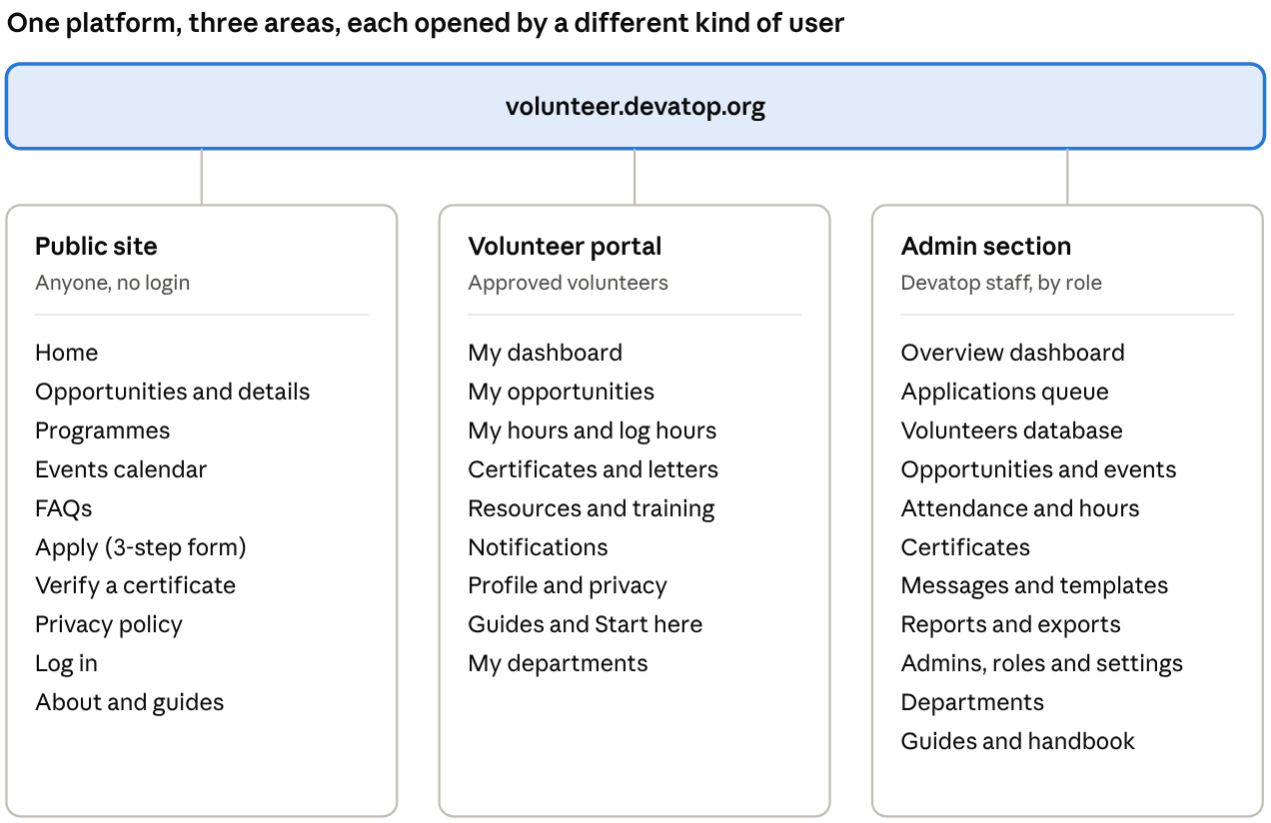

Each phase builds on the one before; Phase 1 alone is enough to replace the lost site.

Next steps

- [ ] Decide the lowest age accepted and which roles are open to under-18 volunteers.
- [ ] Agree the admin roles and who fills each one.
- [ ] Choose the tech stack and hosting, under a Devatop-owned account.
- [ ] Prepare the certificate template and safeguarding agreement text.

10. Platform structure

The platform has three areas on one address: a public site anyone can visit, a portal for approved volunteers, and an admin section for Devatop staff.

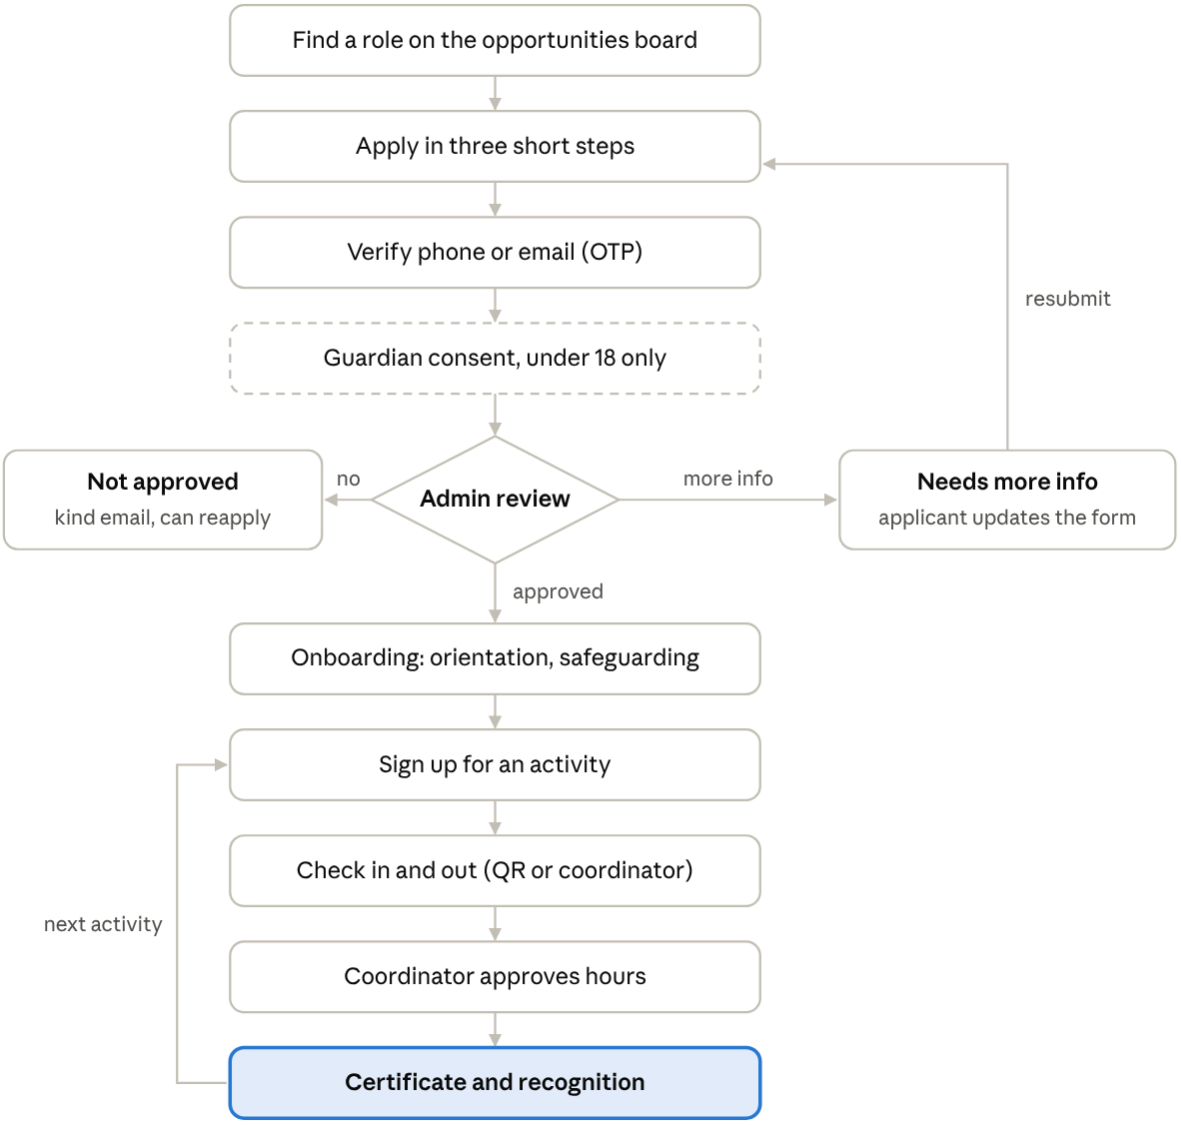

platform sitemap · 3 areas

Logging in sends each person to their own area; admins see only the pages their role allows.

11. Key user journeys

A visitor becomes an active volunteer through one review step, then repeats a simple loop of activities that each end in approved hours.

Every volunteer passes one review, then repeats the activity loop

volunteer journey · visitor to certificate

The dashed step only appears for applicants under 18.

Admin journeys to design around

1. **Review applications**: open the queue, read an application, approve, reject or ask for more info, in under a minute each.
2. **Run an event**: create the opportunity, see who signed up, print or show the QR code, mark attendance, approve hours in bulk afterwards.
3. **Report to a funder**: pick a programme and date range, see volunteers and hours, export to Excel or PDF.
4. **Issue certificates**: select volunteers, generate certificates, and they appear on each volunteer's dashboard.

12. Look and feel (UX)

The platform should feel like joining a youth movement that takes action, not filling a government form. It should match devatop.org: Devatop orange (#F05023) as the brand colour, real photos of volunteers in the field, and the same action-first voice as the current volunteers page ("Volunteers are known by action, not by registration").

How it should feel

Quality	What it means in practice
Action-first	Every page ends with one clear next step: apply, sign up, log hours. No dead ends.
Warm and youthful	Plain, friendly English; light Pidgin in small places, like Talkam does ("If you see am, Talkam").
Dignified	Show volunteers at work, not suffering. Never show survivors' faces or identifying details.
Trustworthy	Explain in one line, right at the form, why each piece of data is collected and who sees it.
Rewarding	Hours, milestones and certificates are always visible, so volunteers see their impact grow.

UX rules for the volunteer side

- **Mobile-first and light on data**: most volunteers will use phones on paid data. Compressed images, fast public pages, nothing heavy to download.
- **Short application**: three steps with a progress bar (About you, Skills and availability, Consent), and progress saved so people can finish later.
- **Always show status**: the dashboard says where the application stands and what happens next, so nobody has to ask on WhatsApp.
- **Low effort to take part**: signing up for an activity takes one tap; checking in is a QR scan.
- **Readable for everyone**: large tap targets, strong contrast, simple words, works on small and older Android phones.

UX rules for the admin side

- **Open on "what needs me today"**: pending applications, hours waiting for approval, events this week.
- **Tables built for work**: search, filters, bulk actions and export on every list.

- **Fewest clicks for frequent jobs**: approve an application or a batch of hours without opening each record.
- **Every sensitive action is confirmed and logged**: rejecting, suspending, deleting, exporting.

Visual design (colours, type, components) will be covered in the UI phase.

13. Recommended tech stack

Build it as one Next.js and TypeScript app on a PostgreSQL database. It is React (which you already use), one codebase for public site, volunteer portal and admin, and the stack Claude Code knows best, with TypeScript catching mistakes before they reach users.

Layer	Choice	Why
Framework	Next.js 16 (App Router), TypeScript	Current major version (support policy); server and frontend in one project
Styling and components	Tailwind CSS, shadcn/ui	Fast to build, accessible components, easy to theme in Devatop orange
Database	PostgreSQL on Supabase	Relational data fits volunteers, events and hours; includes file storage, and daily backups on the paid plan
Database access	Drizzle ORM	Typed queries and migrations kept in the repo
Login	Supabase Auth (email or phone OTP)	No passwords to forget; matches the OTP verification requirement
Forms and validation	React Hook Form, Zod	One set of rules checks data in the browser and on the server
Email	Brevo or Resend	Transactional emails and bulk sends to filtered groups
Certificates	@react-pdf/renderer, qrcode	PDF certificates with a QR verification code
Scheduled jobs	Vercel Cron or Supabase pg_cron	Event reminders, overdue hours approvals, weekly summaries

Layer	Choice	Why
Hosting	Vercel (Pro plan) or a VPS	Simple deploys from GitHub; on volunteer.devatop.org, the old site's address
Monitoring	Sentry	Alerts when something breaks for a volunteer
Testing	Vitest, Playwright	Unit tests for rules (hours, consent); end-to-end tests for apply and approve
Motion	GSAP (ScrollTrigger, SplitText, DrawSVG), @gsap/react	Letter reveals, scroll moments, map fills, tally marks; free for commercial use (see section 16)
Smooth scroll	Lenis	Smooth scrolling on desktop only; phones keep native scrolling

Alternative: Laravel with the Filament admin panel. It gives a full admin section almost for free and runs on cheap Nigerian shared hosting, but it means PHP instead of React.

Decision: Next.js. You already work in React, so you can read, review and fix what Claude Code writes. Claude Code is strongest in TypeScript and React, and the volunteer side needs a custom, emotional design that Filament's ready-made admin look would fight against. shadcn/ui tables and forms cover the admin section well enough.

All accounts (GitHub, Supabase, Vercel, Brevo, domain) are opened with an official Devatop email, as required in section 8. Supabase and Vercel host data outside Nigeria, so the privacy policy must say so.

14. Data model

About 20 tables cover Phase 1 and 2. The volunteer profile sits at the centre; everything else links to it.

Table	Holds	Links to
users	Login identity: email, phone, role (volunteer or admin)	One profile; one admin role
volunteer_profiles	Name, date of birth, state, LGA, skills, availability, status	users; applications; signups; hour_logs

Table	Holds	Links to
applications	Answers, stage (submitted to approved), reviewer notes	volunteer_profiles; reviewing admin
consents	Each consent given or withdrawn, with text version and timestamp	volunteer_profiles
guardian_consents	Guardian name, contact, verification, timestamp for under-18s	volunteer_profiles
admin_roles	Role (Super Admin to Viewer) and the state or programme it covers	users; programmes
programmes	AI4Rights, Talkam, outreach and other programmes	opportunities
opportunities	Roles and events: title, location, slots, skills, dates	programmes; signups
signups	A volunteer's place on an opportunity, or on the waitlist	volunteer_profiles; opportunities
attendance	Check-in and check-out times, method (QR or coordinator)	signups
hour_logs	Hours claimed or recorded, and their approval status	volunteer_profiles; opportunities; approving admin
trainings, training_completions	Required trainings and who finished them	volunteer_profiles
certificates	Issued certificates with a unique verification code	volunteer_profiles
messages	Emails and announcements sent, and to which group	admin sender; tags

Table	Holds	Links to
tags	Groups such as "Abuja team" or "Comms"	volunteer_profiles
audit_logs	Who did what to which record, and when	users
departments	Name, description, icon, lead, status (active or archived), merged-into, sort order	department_memberships; opportunities; guides
department_memberships	A volunteer in a department, their role (Member or Team Lead), status (requested, active, left) and dates	volunteer_profiles; departments
guides	Title, body, audience (public, volunteers, department, admins), order, published, must-read flag, last updated	departments; author admin; guide_reads
guide_reads, checklist_progress	Who has read each must-read guide, and each person's Start here progress	users; guides

Two rules live in the database, not only in the code: hours can only be approved by an admin, and a volunteer under 18 cannot be approved without a guardian consent record.

15. Project structure for Claude Code

One repository, with the three areas of the platform as three route groups, so Claude Code can work on one area without touching the others.

```
devatop-volunteers/
  CLAUDE.md                 project rules Claude Code reads every session
  docs/requirements.md      this document, exported
  docs/developer/           architecture, deploy, runbook, handover (section
19)
  src/
    app/
      (public)/             home, opportunities, programmes, events, faqs,
```

```
about, guides, apply, verify
      (volunteer)/          dashboard, my-opportunities, hours, certificates,
guides, departments, profile
      (admin)/admin/        overview, applications, volunteers,
opportunities, attendance,
                            hours, certificates, messages, departments,
guides, reports, settings
      api/                  webhooks, cron jobs, certificate PDFs
    components/
      ui/                   shadcn/ui components
      shared/               forms, tables, status badges used across areas
    lib/
      auth/                 login, sessions, role checks
      db/                   Drizzle schema, queries, migrations
      email/                email templates and sending
      validation/           Zod schemas shared by forms and server
      permissions.ts        who can see and do what, in one place
  tests/
    unit/                   Vitest
    e2e/                    Playwright: apply, approve, check in, certificate
```

What goes in CLAUDE.md

- The stack and the commands to run, test and migrate.
- Rules: every admin page checks permissions through `permissions.ts`; every form uses a shared Zod schema; no personal data in URLs or logs.
- Build one feature at a time, with a test, on its own branch.
- Point to `docs/requirements.md` as the source of truth for features.

How to build it with Claude Code

1. Set up the repo, accounts and CLAUDE.md under Devatop's official email.
2. Ask Claude Code for the database schema first and review it before any pages.
3. Build Phase 1 in this order: auth and roles, application flow, admin review, volunteer dashboard, opportunities and sign-ups, hours, certificates, emails.
4. After each feature: run the tests, try it on a phone, then merge.
5. Deploy to a staging address first, then to volunteer.devatop.org.

16. UI direction: "Known by Action"

The site is built around big, heavy type that real volunteers show through, a Nigeria map made of their photos, and a cursor that invites you to act. It keeps Devatop's own line, "Volunteers are known by action, not by registration", as the spine, and turns the word **ACTION** into the hero image itself.

What we take from your three pins

Your pin	What we take	What we leave out
1. Voices United, by Phenomenon Studio	Giant condensed capitals with real photos showing through the letters; type as the hero image; orange call to action	The centred, symmetrical layout: our type sits hard left and runs off the right edge
2. "Justice begins where inequality ends" charity template	A photo clipped inside a map shape; a map showing where volunteers are needed; a serif headline	Children's faces, soft shadow cards and coloured icon tiles
3. DonateX donation page	One emotional word in orange inside a black headline; a small "Become a volunteer" tag sitting over the hero photo; a big stats row; a hand-drawn arrow	Floating rounded cards with shadows (ours are flat with an ink edge) and dot-grid decoration

Pins 2 and 3 lead with close-ups of children. Devatop cannot do that: its work involves trafficked and at-risk children, so our photos show adult volunteers in action, and never an identifiable child or survivor.

Signature moments that drive emotion

Moment	What the volunteer sees	What they should feel
Homepage hero	**ACTION** set huge, hard left, with black-and-white volunteer photos showing through the letters and slowly changing; above it, "Volunteers are known by" in smaller type	This is real people, doing real things, right now
The map	A Nigeria map filled with volunteer photos; states where Devatop volunteers have worked burn orange, and pointing at a state shows how many hours were given there	We are spreading across the country

Moment	What the volunteer sees	What they should feel
Calls to action board	Opportunities set like urgent dispatch notices: place, date, how many hands needed, slots left; the cursor turns into a "Sign up" disc over each row	Someone specific needs me, this week
Approval screen	"YOU'RE IN, AMAKA" in the giant type, with the volunteer's own profile photo showing through their name, and a version sized for WhatsApp status	Chosen, proud, ready to tell people
My record	Hours drawn as tally marks that ink themselves in, and every activity listed like a ledger entry	My effort is counted and it adds up
Certificate	A front page of "The Devatop Record" with their name as the headline and a QR code to verify it	I did something worth printing
The Roll	Every volunteer's name (opt-in) moving slowly across the page like a news ticker	I belong to something bigger

Colour

Talkam Orange dominates in big flat fields, never in gradients; everything else is ink on warm paper.

Name	Hex	Use
Talkam Orange	#F05023	Dominant: hero fields, the one emotional word in headlines, cursor disc, buttons, map states
Ink	#16130F	All text, flat borders, rules, the black-and-white photos
Newsprint	#F2EDE3	Page background: warm off-white, like your first pin
Stamp Green	#0B6E4F	Status only: approved, verified, hours accepted

Text on orange is always Ink; white on orange only at 24 px bold and above, for contrast. At least 25% of every page stays open newsprint.

Typography

Role	Typeface	How it's used
Display	Big Shoulders Display, Black	Uppercase, very tight, very large: ACTION, names, numbers, section titles; the face photos show through
Accent	Fraunces Italic	One emotional word per headline, in orange, like your third pin ("Show up for *someone*")
Body	Atkinson Hyperlegible Next	Paragraphs, forms, buttons; built for legibility on small, cheap phone screens

All three are free on Google Fonts. Big Shoulders is a condensed civic-poster face that is not overused, unlike Bebas Neue or Anton, which would make the hero look like a template.

Layout

- **Off-centre editorial grid**: 12 columns; the giant type starts at the left edge and is cropped by the right edge, so the page feels bigger than the screen.
- **Overlap, flat**: like your third pin, a small "Become a volunteer" ticket sits over the corner of the hero photo, but as a flat newsprint tag with an ink edge and a strip of orange "tape", not a floating shadow card.
- **Rules instead of boxes**: 1 px ink lines divide sections and list rows, like newspaper columns.
- **Numbers as architecture**: hours, volunteers and states reached are set in the display face across the full width, not in small stat cards.
- **Split-screen application**: left side orange with one big question per step ("What can your *hands* do?"), right side the form on newsprint.
- **Mobile keeps the drama**: ACTION still fills the screen width; the map and calls stack; an "Apply" bar is pinned to the bottom.

Imagery

- **Photos inside type and inside the map**: high-contrast black-and-white shots of Devatop volunteers at outreaches, trainings and campaigns, clipped into the letters of ACTION and the shape of Nigeria.
- **One orange duotone** for featured photos; everything else stays black and white.
- **Hand-drawn marks**: an ink arrow pointing at the Apply ticket, a circle around the slots-left number, tally marks for hours. Drawn as SVG so they can ink themselves in.

- **Raw texture**: a faint newsprint grain over the background, made with a tiny SVG filter.
- **Safeguarding**: no identifiable children or survivors, ever; every person photographed has a consent record.

Motion and the custom cursor

The public site moves like a motion site: a custom cursor that turns into an invitation, type that rises into place, and scroll that brings the map and numbers to life. Every movement has a job, and none of it bounces.

The cursor

- At rest: a small ink dot with an orange ring that follows a moment behind the mouse.
- Over anything you can act on, the ring fills orange and grows into a disc with a verb in it: **Join** on the hero, **Sign up** on a call to action, **Read** on a story, **See** on a map state.
- Over the giant photo-filled type, the disc works as a small window that shows that part of the photo in full colour.
- Primary buttons are gently magnetic: they lean a few pixels toward the cursor, then settle. No springing or wobble.
- In forms and on text fields the normal cursor comes back, so typing never feels strange.
- Phones and tablets get no custom cursor; the same verbs appear as labels on tap targets instead.

Page and scroll motion

Where	What moves	How
Page load	The letters of ACTION rise from a baseline one by one, the photos fade up inside them, the orange field wipes in from the left	Once, under 1.2 seconds
Between pages	An orange panel sweeps across and lifts away	Short, so navigation still feels fast
Section headlines	Lines slide up from behind a mask as they enter the screen	Once per headline
The map	States fill orange one after another as the map scrolls into view	Once
Numbers	Hours, volunteers and states count up to their real value	Once, when visible

Where	What moves	How
Tally marks and arrows	Ink themselves in, stroke by stroke	When visible
The Roll	Names drift slowly sideways; speeds up a little while scrolling	Continuous, pauses on hover

Rules

- One easing curve and durations between 0.4 and 1.2 seconds, so everything feels like one hand made it.
- Animate only position, scale and opacity, so it stays smooth on low-cost Android phones.
- Smooth scrolling on desktop only; phones keep native scrolling.
- When the phone or computer is set to reduce motion, everything appears instantly and the normal cursor is used.
- The volunteer dashboard keeps a little motion (tally marks, approval stamp); the admin section has none.

What to build it with (add to the stack in section 13)

Library	For
GSAP with ScrollTrigger, SplitText and DrawSVG	Letter reveals, scroll moments, map fills, tally marks; all plugins are free for commercial use since April 2025
@gsap/react	Runs GSAP safely inside Next.js components
Lenis	Smooth scrolling on desktop
Hand-built cursor component	About 60 lines of code; no library needed, and it stays light

Homepage wireframe

homepage wireframe v2 · desktop

Orange shapes stand for Talkam Orange; the two discs show the cursor over the hero and over a call to action. The map outline is simplified, and names and places are examples.

17. Build handoff for Claude Code

This section closes the gaps Claude Code would otherwise guess at: who can do what, when a feature counts as done, the project rules file, the design tokens in code, and the words on the screens and in the emails. Copy it into the repo as described in section 15.

Permissions matrix

Every admin action is denied unless this table allows it. "Own programme" and "Own state" mean the admin only sees and acts on volunteers, opportunities and hours inside the programme or state their role covers.

Action	Super Admin	Programme Manager	Volunteer Coordinator	State or Department Lead	Viewer
See overview dashboard	Yes	Own programme	Yes	Own state	Yes
See volunteer list and profiles	Yes	Own programme	Yes	Own state	Names only
See phone, email and address	Yes	Own programme	Yes	Own state	No
See date of birth and guardian details	Yes	No	Yes	No	No
Review and decide applications	Yes	Own programme	Yes	Own state	No
Approve an under-18 applicant	Yes	No	Yes, only after guardian consent is verified	No	No
Suspend or reactivate a volunteer	Yes	Own programme	No	No	No
Delete a volunteer's data (on their request)	Yes	No	No	No	No
Create and edit opportunities and events	Yes	Own programme	Yes	Own state	No
Take attendance	Yes	Own programme	Yes	Own state	No
Approve, edit or reject hours	Yes	Own programme	Yes	Own state	No
Issue certificates	Yes	Own programme	Yes	No	No
Send bulk email to a group	Yes	Own programme	Yes	Own state	No
See reports	Yes	Own programme	Yes	Own state	Yes
Export reports (totals only)	Yes	Own programme	Yes	Own state	No
Export personal data (contact details)	Yes	No	No	No	No

Action	Super Admin	Programme Manager	Volunteer Coordinator	State or Department Lead	Viewer
Manage trainings and resources	Yes	Own programme	Yes	No	No
Manage admins and roles	Yes	No	No	No	No
Edit settings, certificate and email templates	Yes	No	No	No	No
See the audit log	Yes	No	No	No	No
Add, rename, merge, archive or restore departments	Yes	No	No	No	No
Assign volunteers to departments, accept join requests	Yes	Own programme	Yes	Own state or department	No
Write, edit and publish guides	Yes	Own programme	Volunteer guides only	Own department guides	No
Edit the admin handbook and About page	Yes	No	No	No	No

Rules for the code

- Permissions live in one file, `src/lib/permissions.ts`, as a function `can(admin, action, record)`; every admin page and server action calls it.
- Checks run on the server. Hiding a button is not a permission check.
- The programme and state scope is applied inside the database query, so out-of-scope records are never even loaded.
- Volunteers can only read and change their own records.
- Every admin write (approve, reject, edit, delete, export, message) adds a row to `audit_logs`.

For a Department Lead, read "Own state" in the table as "own department". A volunteer Team Lead is not an admin: they act only inside the volunteer portal, on their own department (section 18).

Acceptance criteria (Phase 1)

A feature is done only when every box under it is true and has a test. Tick them off as Claude Code finishes each one.

Login and roles

- [ ] A person can log in with an email or phone one-time code; no passwords are stored.

- [ ] A volunteer who opens any `/admin` page gets a "not allowed" page, checked on the server.
- [ ] Each admin role sees exactly what the permissions matrix allows, tested for every role.
- [ ] Admins must use two-factor sign-in; sessions in the admin section end after 30 minutes idle.

Application

- [ ] The form has three steps with a progress bar, and saved progress survives closing the browser.
- [ ] Every consent box records the exact text version agreed to and a timestamp.
- [ ] An applicant under 18 cannot submit until a parent or guardian confirms through their own email or phone code.
- [ ] The applicant gets the "application received" email within a minute.
- [ ] The application status on the dashboard matches what the admin set, at every stage.

Admin review

- [ ] The queue lists pending applications oldest first, filterable by state and programme.
- [ ] Approve, reject and "needs more info" each work from the queue and send the right email.
- [ ] The database refuses to approve an under-18 applicant without a verified guardian consent record.
- [ ] Every decision is written to the audit log with the admin's name and time.

Volunteer dashboard

- [ ] Shows status, upcoming sign-ups, total approved hours and certificates.
- [ ] A volunteer can edit their profile, download their data, and withdraw consent or delete their account.
- [ ] Withdrawing consent stops all emails and hides the volunteer from the Roll within one minute.

Opportunities and sign-ups

- [ ] Admins can create an opportunity with slots, location, date, skills and deadline.
- [ ] Volunteers sign up in one tap; sign-up closes when slots are full or the deadline passes.
- [ ] Cancelling frees the slot immediately.

Attendance and hours

- [ ] A coordinator can mark attendance from the sign-up list on a phone.
- [ ] Volunteers can submit hours for remote work; they stay "pending" until an admin approves.

- [ ] Only approved hours count toward totals, certificates and reports.
- [ ] Admins can approve a batch of hours in one action.

Certificates

- [ ] A certificate PDF shows name, role, approved hours, dates and a unique code with a QR.
- [ ] Scanning the QR opens a public verify page showing the certificate is genuine, with no other personal data.
- [ ] A certificate cannot be issued for hours that are not approved.

Emails, reports and exports

- [ ] All seven emails in the copy section below send from a Devatop address and render on a phone.
- [ ] The overview dashboard numbers match the database.
- [ ] Exports produce Excel and CSV; personal-data exports are Super Admin only and logged.

Ownership, security and speed

- [ ] All accounts are under an official Devatop email, with at least two Super Admins.
- [ ] A daily database backup runs, and a restore has been tested once.
- [ ] The public homepage loads in under 3 seconds on a throttled 3G connection on a mid-range Android phone.
- [ ] No personal data appears in URLs, logs or error messages.
- [ ] With reduced motion turned on, no animation runs and the normal cursor is used.

Departments and guides

- [ ] A Super Admin can add, rename, merge, archive and restore a department with no code change, and each action shows how many volunteers it affects.
- [ ] Archiving or merging keeps every volunteer's hours and certificates intact; a department with history can never be hard-deleted.
- [ ] The application form and filters show only active departments, read from the database.
- [ ] A Department Lead sees only their department's volunteers, calls and hours.
- [ ] The public About page, the volunteer Start here checklist and the admin Start here checklist all exist and are editable in the admin section.
- [ ] Guides show only to their audience, and search returns only guides the person may see.
- [ ] Reading the code of conduct and safeguarding guide is recorded, and Start here is not complete until both are read.

- [ ] The five developer docs in section 19 exist in the repository before launch.

CLAUDE.md

Save this as `CLAUDE.md` in the root of the repository. Claude Code reads it at the start of every session.

```
# Devatop Volunteers Platform

Volunteer platform for Devatop Centre for Africa Development, at
volunteer.devatop.org.
Three areas: public site, volunteer portal, admin section.
Source of truth for features: docs/requirements.md. If this file and that one
disagree, ask.

## Stack
- Next.js 16 (App Router), TypeScript strict mode
- Tailwind CSS + shadcn/ui, theme in src/app/globals.css
- PostgreSQL on Supabase, Drizzle ORM, migrations in src/lib/db/migrations
- Supabase Auth (email or phone one-time code)
- React Hook Form + Zod; schemas in src/lib/validation, shared by forms and
server
- Brevo for email, @react-pdf/renderer + qrcode for certificates
- GSAP (ScrollTrigger, SplitText, DrawSVG) + @gsap/react, Lenis: public site
only
- Vitest (unit), Playwright (end-to-end), Sentry (errors)

## Commands
- pnpm dev            run locally
- pnpm test           unit tests
- pnpm test:e2e       Playwright tests
- pnpm db:generate    create a migration from schema changes
- pnpm db:migrate     apply migrations
- pnpm lint && pnpm typecheck   must pass before every commit

## Structure
- src/app/(public)      home, opportunities, programmes, events, faqs, about,
guides, apply, verify
- src/app/(volunteer)   dashboard, my-opportunities, hours, certificates,
guides, departments, profile
- src/app/(admin)/admin overview, applications, volunteers, opportunities,
attendance,
                        hours, certificates, messages, departments, guides,
reports, settings
- src/lib/permissions.ts  the only place access rules live
```

```
## Rules that must never be broken
1. Every admin page and server action calls can(admin, action, record) from
   src/lib/permissions.ts. Checks run on the server. Hiding a button is not a
check.
2. Programme and state scope is applied in the database query, not after
loading.
3. Volunteers can only read and change their own records.
4. Every admin write adds a row to audit_logs.
5. No personal data (names, phones, emails, dates of birth) in URLs, logs or
error messages.
6. An under-18 volunteer cannot be approved without a verified
guardian_consents row.
   Enforce this in the database too, not only in code.
7. Only approved hours count toward totals, certificates and reports.
8. Every consent stores the text version and a timestamp.
9. Never use photos of identifiable children or survivors in seed data or UI.
10. Departments are rows in the departments table. Never hard-code department
names;
    archive or merge instead of deleting, so hours and certificates are never
lost.

## Design rules
- Follow section 16 of docs/requirements.md and the tokens in globals.css.
- Fonts: Big Shoulders Display (display), Fraunces Italic (one accent word),
  Atkinson Hyperlegible Next (body). Never Inter, Roboto, Arial or Poppins.
- Colours: Talkam Orange #F05023 dominant, Ink #16130F, Newsprint #F2EDE3,
  Stamp Green #0B6E4F for status only. No gradients, glows, glass cards or
heavy shadows.
- Text on orange is Ink. White on orange only at 24px bold and above.
- Motion and the custom cursor on the public site only. Respect prefers-
reduced-motion
  and pointer: coarse (no custom cursor on touch). No motion in the admin
section.
- Mobile first. Test every page at 375px wide.

## How to work
- One feature per branch, in the order in section 15 of docs/requirements.md.
- Write the tests from the acceptance criteria in section 17 before calling a
feature done.
- Show the database schema for review before building pages on it.
- Never commit secrets. Environment variables go in .env.local (not
committed);
  list every new one in .env.example.
- When unsure about a product decision, ask instead of guessing.
```

Design tokens

These files turn section 16 into code, so every page uses the same colours, fonts, sizes and motion. Alert Red is new here: it is for form errors and rejected status only.

src/app/globals.css (Tailwind CSS v4)

```
@import "tailwindcss";

@theme {
  /* Colour */
  --color-orange: #F05023;      /* Talkam Orange, dominant */
  --color-ink: #16130F;         /* all text, borders, rules */
  --color-paper: #F2EDE3;       /* Newsprint background */
  --color-stamp: #0B6E4F;       /* approved, verified: status only */
  --color-alert: #B42318;       /* errors, rejected: status only */
  --color-rule: rgb(22 19 15 / 0.18);

  /* Fonts (variables come from next/font in layout.tsx) */
  --font-display: var(--font-big-shoulders), Impact, sans-serif;
  --font-accent: var(--font-fraunces), Georgia, serif;
  --font-body: var(--font-atkinson), system-ui, sans-serif;

  /* Type scale: fluid, mobile to desktop */
  --text-hero: clamp(5rem, 22vw, 18rem);
  --text-display: clamp(2.75rem, 8vw, 7rem);
  --text-title: clamp(1.75rem, 4vw, 3rem);
  --text-lead: clamp(1.125rem, 1.6vw, 1.375rem);

  /* Shape and motion */
  --radius-sm: 2px;
  --ease-ink: cubic-bezier(0.22, 1, 0.36, 1);
}

@layer base {
  html { background: var(--color-paper); color: var(--color-ink); }
  body { font-family: var(--font-body); font-size: 1.0625rem; line-height:
1.55; }
  h1, h2, .display { font-family: var(--font-display); font-weight: 900;
    text-transform: uppercase; line-height: 0.88; letter-spacing: -0.01em; }
  em.accent { font-family: var(--font-accent); font-style: italic;
    color: var(--color-orange); text-transform: none; }
  hr, .rule { border: 0; border-top: 1px solid var(--color-ink); }
  :focus-visible { outline: 3px solid var(--color-orange); outline-offset:
2px; }
}
```

```
/* Faint newsprint grain, public site only */
.grain { background-image: url("/textures/grain.svg"); background-size:
240px; }

@media (prefers-reduced-motion: reduce) {
  *, *::before, *::after { animation: none !important; transition: none
!important; }
}
```

src/app/layout.tsx (fonts)

```
import { Big_Shoulders_Display, Fraunces, Atkinson_Hyperlegible_Next } from
"next/font/google";

const display = Big_Shoulders_Display({ subsets: ["latin"], weight: ["900"],
variable: "--font-big-shoulders" });
const accent = Fraunces({ subsets: ["latin"], style: ["italic"], weight:
["600"], variable: "--font-fraunces" });
const body = Atkinson_Hyperlegible_Next({ subsets: ["latin"], weight: ["400",
"700"], variable: "--font-atkinson" });

export default function RootLayout({ children }: { children: React.ReactNode
}) {
  return (
    <html lang="en" className={`${display.variable} ${accent.variable}
${body.variable}`}>
      <body>{children}</body>
    </html>
  );
}
```

If `next/font` names a font slightly differently (Google sometimes renames families), use the name it suggests; the fonts stay the same.

src/lib/motion.ts (one place for motion settings)

```
export const EASE = "power3.out";          // GSAP match for --ease-ink
export const DURATION = { fast: 0.4, base: 0.7, slow: 1.2 };
export const STAGGER = 0.06;               // between letters or rows
export const prefersReducedMotion = () =>
  typeof window !== "undefined" && window.matchMedia("(prefers-reduced-
motion: reduce)").matches;
export const hasFinePointer = () =>
  typeof window !== "undefined" && window.matchMedia("(pointer:
fine)").matches;
```

Copy

The voice is direct, warm and a little bold, with light Pidgin where it feels natural. Words in [square brackets] are filled in by the system; anything marked **(confirm)** is a fact Devatop must check before launch.

Key page text

Where	Text
Homepage kicker	Volunteers are known by
Homepage hero	ACTION
Homepage line	Show up for *someone*.
Homepage intro	Join the young people fighting human trafficking, gender-based violence and other abuses across Nigeria. Bring your time, your skill, your voice.
Apply button	Become a volunteer
Apply step 1	Who are *you*?
Apply step 2	What can your *hands* do?
Apply step 3	Can we count on *you*? (consent and code of conduct)
Application sent	Done. We have your application, [first name]. We'll reply within [7 days] **(confirm)**.
Approval screen	YOU'RE IN, [FIRST NAME]. Welcome to the movement.
Approval screen button	Share on WhatsApp
Calls to action, empty	No open calls right now. New ones drop often, so check back, or turn on alerts.
My hours, empty	Your record starts with your first action. Find a call to action.
Certificate verify page	This certificate is genuine. Issued by Devatop Centre for Africa Development to [name] for [hours] hours of volunteering, [start date] to [end date].
Not allowed page	This page is not for your account. Go back to your dashboard.

Where	Text
Footer	If you see am, *Talkam*.

Emails

All emails come from a Devatop address, start with the volunteer's first name, and stay short enough to read on a phone.

1. **Application received**
   - Subject: We got your application, [first name]
   - Body: Thank you for stepping up. Our team will review your application and reply within [7 days] **(confirm)**. You can check your status any time: [dashboard link]. Volunteers are known by action. Yours starts soon.
2. **Guardian consent request** (applicant under 18)
   - Subject: [Applicant first name] wants to volunteer with Devatop
   - Body: [Applicant first name] has applied to volunteer with Devatop Centre for Africa Development, a youth-led organisation working against human trafficking and abuse. Because they are under 18, we need your permission first. See what they'll do and how we keep young volunteers safe, then give or refuse consent: [consent link]. This link works for 7 days. If you did not expect this email, you can ignore it.
3. **Needs more information**
   - Subject: One more thing before we decide, [first name]
   - Body: We need a little more from you: [admin's note]. Update your application here: [link]. Once you do, it goes straight back to the review queue.
4. **Approved**
   - Subject: You're in, [first name]
   - Body: Welcome to the movement. Your next steps: finish orientation and safeguarding training, then join the volunteers WhatsApp group: [WhatsApp link]. After that, pick your first call to action: [link]. We're glad you're here.
5. **Not approved**
   - Subject: About your Devatop application
   - Body: Thank you for applying, [first name]. We can't take your application forward this time: [short reason, optional]. This is not a no forever. You can apply again from [date], and you can still support the work by following Talkam: [link].
6. **Activity reminder** (sent the day before)
   - Subject: Tomorrow: [opportunity title]

- Body: You're down for [opportunity title] on [date] at [time], [location]. Your contact on the day: [coordinator first name], [phone]. Can't make it? Cancel here so someone else can take your place: [link].

7. **Thank you and hours approved**
   - Subject: [hours] hours added to your record
   - Body: Thank you for showing up for [opportunity title]. [hours] hours have been approved and added to your record. Total so far: [total hours]. See your record: [link].

FAQs

Question	Answer
Who can volunteer?	Anyone in Nigeria who shares the cause. If you're under 18, a parent or guardian must give consent, and the lowest age we accept is [age] **(confirm)**.
Is it paid?	No. Volunteering is unpaid. [Transport support for field activities] **(confirm)**.
Can I volunteer online?	Yes. Comms, design, research and tech roles are often remote. Filter calls to action by "Online".
I'm a corps member or student. Can I get a letter?	Yes. Your dashboard gives you an hours statement and certificate, and you can request a letter from there.
How long does approval take?	Usually within [7 days] **(confirm)**. Your dashboard always shows where your application stands.
What happens to my data?	We use it only to run the volunteer programme. You can download it, correct it or delete your account from your dashboard at any time. Read the privacy policy: [link].
Will I work with children or survivors?	Only in specific roles, and only after safeguarding training and checks.
Can I stop volunteering?	Yes, any time. Set your profile to inactive, or delete your account.

18. Departments and volunteer roles

Every volunteer belongs to one or more departments, and a Super Admin can add, rename, merge or archive departments from the admin section without a developer. Departments are data, never hard-coded, so changing Devatop's structure never needs new code. **Phase 1.**

Starting departments **(confirm)**

These are placeholders until Devatop confirms its real list; all of them can be changed in the admin section on day one.

Department	What volunteers there do
Communications and Media	Social media, writing, design, photography, video, podcast
ICT	Websites, tech support, data, digital safety training
Programmes and Field Outreach	Community sensitisation, school visits, campaigns
Research and Advocacy	Research, policy briefs, documentation
Talkam	Supporting human rights reporting and response through Talkam
AI4Rights	Data-rights and AI awareness sessions
Events and Logistics	Planning and running events, trainings and outreaches
Partnerships and Fundraising	Donor research, proposals, partner outreach

Volunteer roles inside a department

Role	Can do
Member	Join the department's calls to action, see its guides and announcements
Team Lead	Everything a Member can, plus see the department's member list, post announcements, take attendance and recommend hours for approval

Role	Can do
Department Lead (admin role)	Staff or senior volunteer who manages the department in the admin section; same powers as a State Lead, scoped to the department

A volunteer picks the departments that interest them when applying; the admin who approves them confirms one or more. Volunteers can ask to join another department from their profile, and the Department Lead accepts or declines.

Changing departments

Action	What happens	Who
Add	New department with a name, short description, lead and optional icon; appears in the application form and filters at once	Super Admin
Rename or edit	Name, description or lead changes everywhere; old records follow, nothing breaks	Super Admin
Merge	Choose a target department; all members, opportunities, guides and hours history move across; the old one is archived	Super Admin
Archive	Hidden from the application form and new opportunities; history, hours and certificates stay intact; the admin must first move or release current members	Super Admin
Restore	Brings an archived department back with its history	Super Admin
Delete for good	Only allowed for a department that has never had members or opportunities, so no record is ever lost	Super Admin

Every department change asks for confirmation, shows how many volunteers it affects, emails the affected volunteers, and is written to the audit log.

Department features across the platform

- Calls to action, guides and announcements can be tagged to a department.
- Volunteers see their department's calls first on their dashboard.
- Reports and exports filter by department.
- Certificates can name the department the volunteer served in.

19. About and guides

The platform teaches each person what they need to know: visitors learn who Devatop is, volunteers learn how to take part, admins learn how to run the programme, and developers learn how to keep the platform alive. Guides are written and edited by admins inside the platform, so nobody needs a developer to update them.

Who gets what

Audience	Where they find it	What it covers	Phase
Visitors	Public **About** page	Who Devatop is, its story and focus areas, the departments and what each does, how volunteering works step by step, code of conduct and safeguarding in plain words	MVP
New volunteers	**Start here** checklist on the dashboard after approval	Orientation, safeguarding training, join WhatsApp group, read your department guide, sign up for a first call; ticks itself off	MVP
All volunteers	**Guides** in the volunteer portal	How to sign up, check in, log hours, get certificates and letters; using Talkam; staying safe in the field; who to contact	MVP
A department's members	Department guide pages	What the department does, current priorities, tools it uses, how its Team Lead runs things	Phase 2
New admins	**Start here** checklist in the admin section on first login	Turn on two-factor sign-in, read the admin handbook, learn their role's limits, practise on a test application	MVP

Audience	Where they find it	What it covers	Phase
All admins	**Admin handbook**	Reviewing applications, running an event, approving hours, issuing certificates, managing departments, data protection duties, what to do in a safeguarding concern	MVP
Developers	`docs/developer/` in the code repository, linked from the admin handbook for Super Admins	Setup, architecture, deploying, environment variables, backups and restore, how to make someone an admin, how to hand the platform over	MVP

How guides work

- **Written in the admin section**: a simple editor with headings, lists, images and video links. Each guide has an audience (public, volunteers, a department, admins), an order, a published switch and a "last updated" date.
- **Help where you need it**: a small "How does this work?" link on key pages (hours, certificates, the review queue) opens the matching guide.
- **Searchable**: one search box across all guides the person is allowed to see.
- **Kept current**: guides not updated for six months are flagged to the Super Admin.
- **Read receipts for must-reads**: the code of conduct and safeguarding guide record who has read them, and the Start here checklist depends on that.

Developer docs to write first

These live in the repository so they survive any change of staff, which is exactly what went wrong with the old site.

1. `README.md` : what the platform is and how to run it locally in under 15 minutes.
2. `docs/developer/architecture.md` : the three areas, the database, auth, email and how they connect.
3. `docs/developer/deploy.md` : how a change gets from a branch to volunteer.devatop.org.
4. `docs/developer/runbook.md` : backups, restoring from a backup, rotating keys, what to do if the site goes down.

5. `docs/developer/handover.md`: every account, who owns it, where logins are kept, and the steps to hand over to the next developer.

What changed elsewhere in this document

- **Section 4**: Department Lead added to the admin roles.
- **Section 10**: the sitemap now includes About and Guides on the public site, Guides and Departments in the volunteer portal, and Departments and Guides in the admin section.
- **Section 14**: four new tables for departments, memberships, guides and reading progress.
- **Section 15 and CLAUDE.md**: new routes, the `docs/developer/` folder, and a rule that departments are never hard-coded.
- **Section 17**: permissions for managing departments and guides, and new acceptance criteria for both.
